

Pickering's

Generators & Distribution Boards

DATA SHEET

Everything you need for adequate and stable power on site. Whatever project you're working on you'll need to get the right amount of power for the job. Attaining a reliable power supply will require a generator and it is important to ensure it is optimally sized to match the load requirements of the site.

Features & Benefits

- Good quality generators are supplied for reliability and back-up service.
- Our super silenced generators provide low noise levels to avoid hassle when working at night or in built-up areas.
- Fuel management available at all Pickering's depots with an initial supply of diesel included for an instant start on site.
- Generators can be supplied on skids, in pods or on a trailer to meet your site specific requirements.
- Choice of generator sizes for the output needed to provide a stable power supply to match load requirements on site.
- Distribution boards in single phase, 3 phase and 110v systems can be made available with ready to use solutions.
- Use of generator for unlimited operating hours is available to provide a solution for long working hours.
- Our generators are serviced every 6 weeks (unless running unlimited hours) to provide reliability and ensure continuous power supply.
- Extension leads are available to hire or buy to suit individual requirements.
- A self-contained Power Pod is available exclusively from Pickering's to provide continuous supply of power and water when no main services are available on site.
