CASE STUDY

Project: Halesowen College

Location: West Midlands

Hire Period: 5 years+

Overview

Halesowen College is a further and higher education college in the heart of the West Midlands with around 3,700 students. It has a reputation for high standards, an excellent learning environment and a caring, supportive sense of community. With an impending refurbishment programme to its teaching blocks there was a need for temporary accommodation to mitigate any disturbances and shortage of classrooms that would arise.

Our Solution

As the refurbishment programme was quickly progressing at the college there was an urgent need for delivery and installation of the temporary accommodation. Pickering's quickly set about completing the groundwork. The site has a gradual slope in two different directions and Pickering's met this challenge with precision engineering to create foundations on which the building would be installed.

Whilst groundwork was underway Pickering's were preparing the building modules at their local hire depot in Birmingham. The building modules were safely installed on site within 2 days. The finished building conforms to current building regulations with four separate classrooms at ground level and two more separate classrooms with an entrance lobby to the first floor.

"With successful pre-planning and project consultation meetings with the college, we're pleased to have provided a high quality temporary building that meets the requirements of the college."
