Pickerings[®]
Temporary Spaces for Expanding Places

A single source for all your needs.

Our increasing range of Pickerings+ solutions is designed to provide you with all the necessary items you'll need on site. Not only do we provide you with high quality buildings but everything you need for a fully functional set-up. All items in this brochure can be ordered at the same time you order your Pickerings portable and modular buildings.

We'll manage everything for you, no matter where you are, to allow you to concentrate on running your business.

Providing the complete turnkey solution.

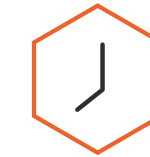

We recognise more and more of our customers want a full turnkey solution on their projects.

With our Pickerings+ solutions you can order everything you need from us and avoid the hassle, time and cost of managing multiple suppliers. We'll not only deliver all you need but provide you with the highest levels of customer service as well.

Single source

A one-stop-shop for all your needs from any Pickerings office.

Ease of doing business

We'll help you avoid the hassle, time and cost of managing multiple suppliers.

Fully functional solutions

Everything you need with your building is available from Pickerings.

One order

Place your order at the same time as your portable and modular buildings order.

Excellence

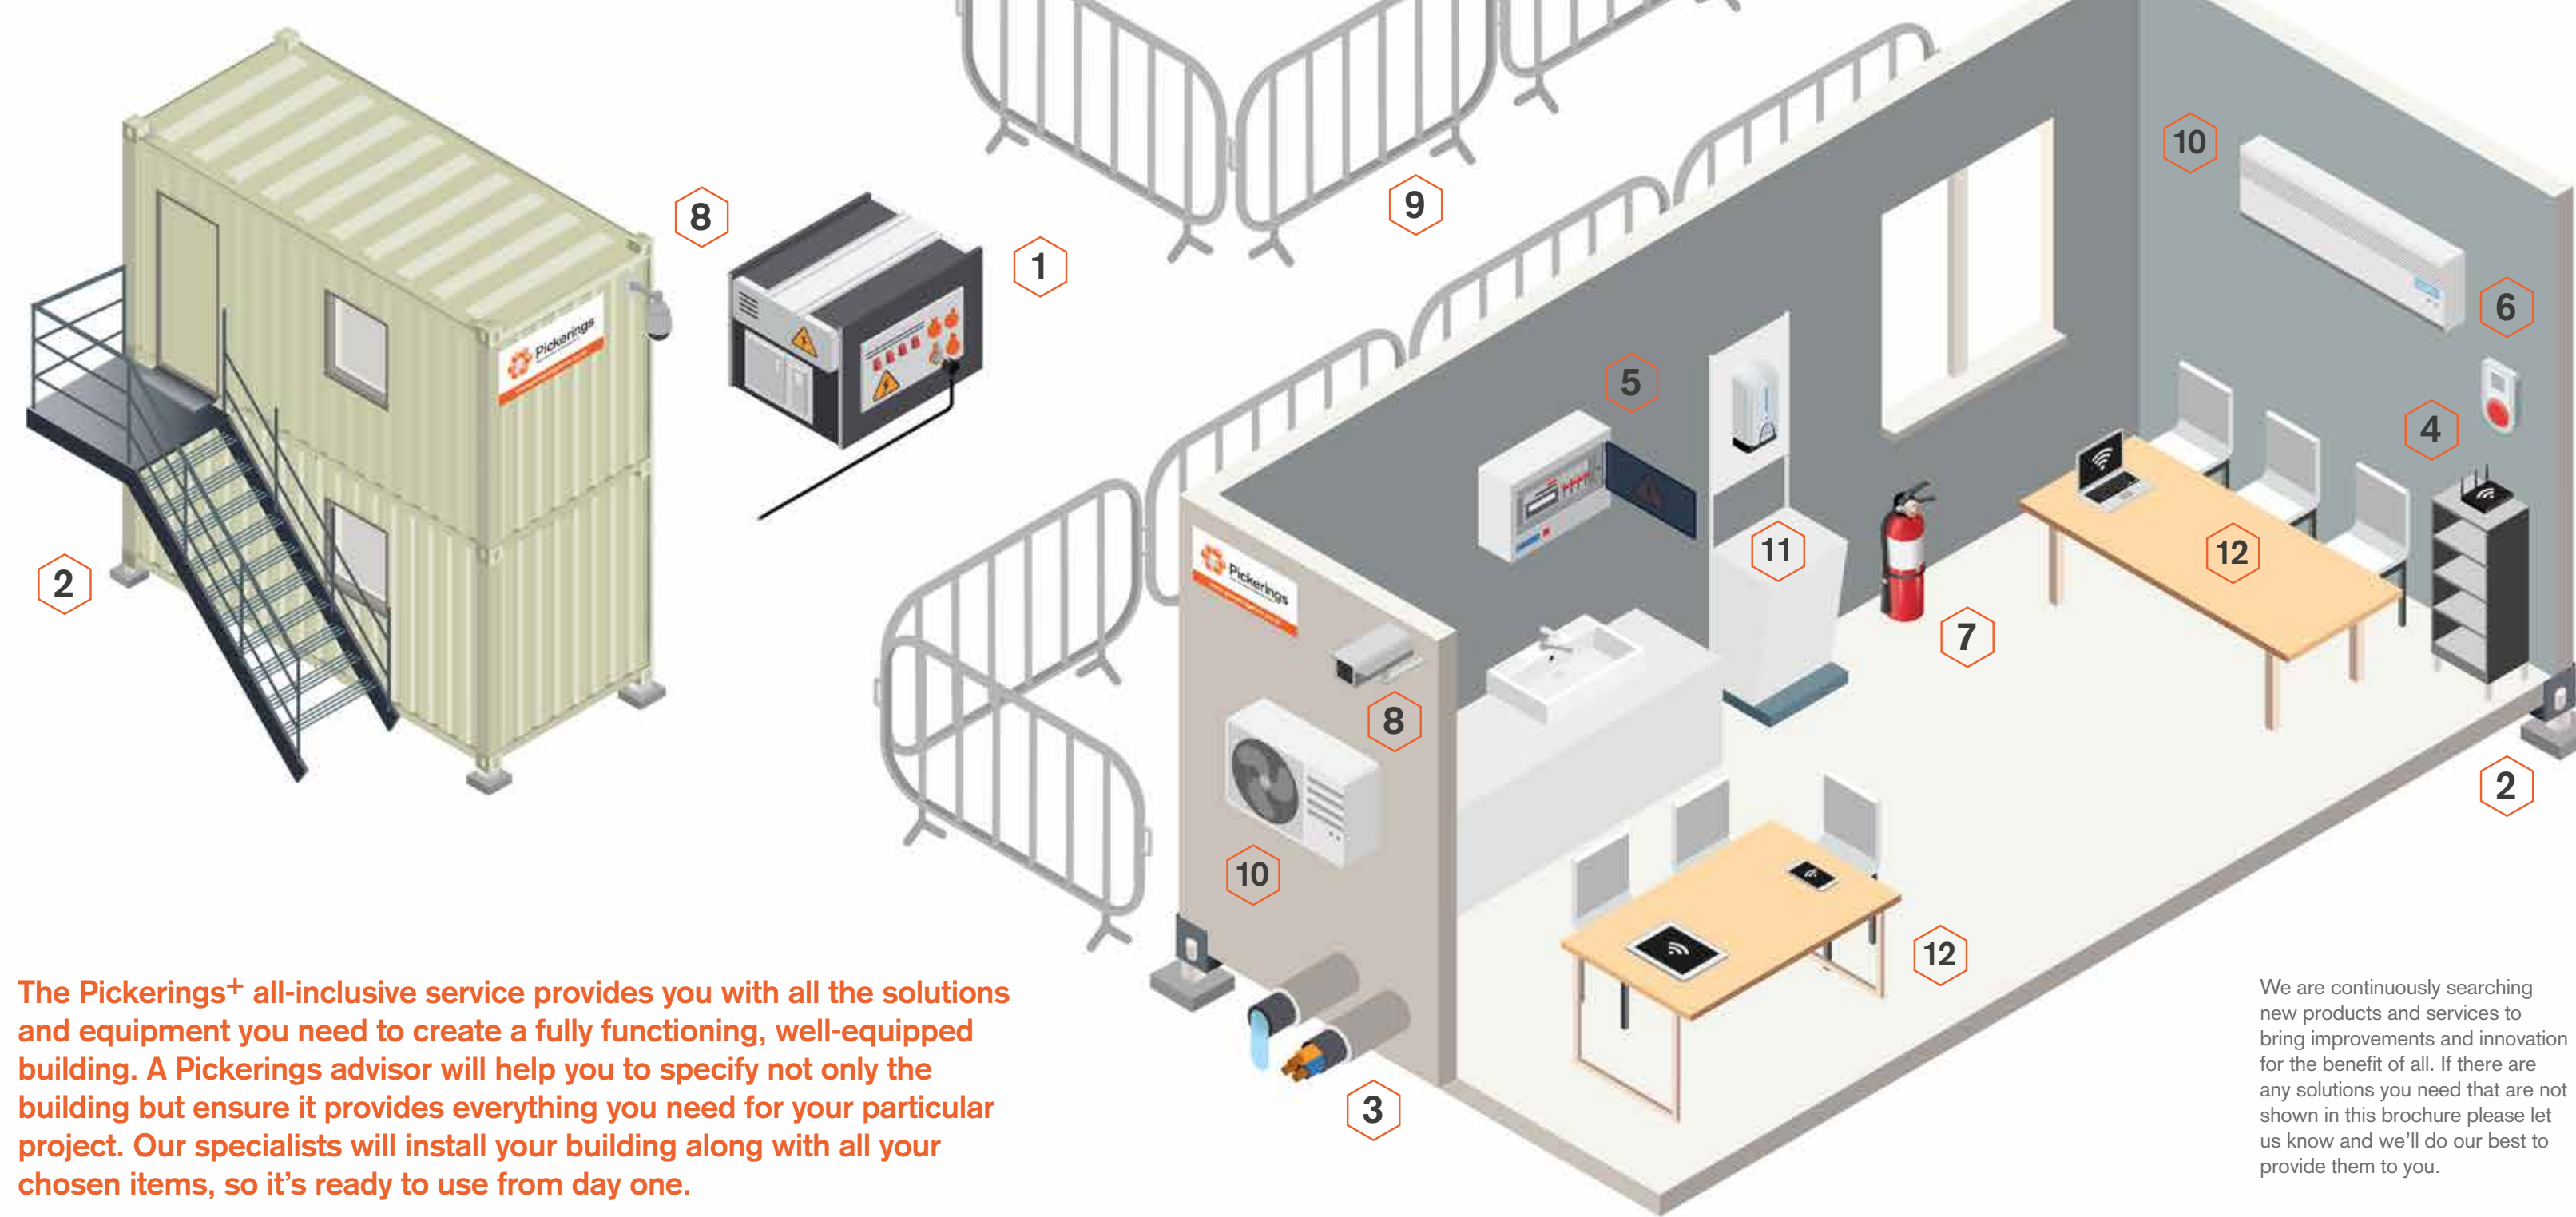

We strive to achieve the highest levels of excellence throughout our activities.

Reassurance

Since 1969 we've solved just about every type of accommodation solution.

The Pickerings+ all-inclusive service provides you with all the solutions and equipment you need to create a fully functioning, well-equipped building. A Pickerings advisor will help you to specify not only the building but ensure it provides everything you need for your particular project. Our specialists will install your building along with all your chosen items, so it's ready to use from day one.

We are continuously searching new products and services to bring improvements and innovation for the benefit of all. If there are any solutions you need that are not shown in this brochure please let us know and we'll do our best to provide them to you.

The Complete Solution.

- 1** **Power supply**
Generators to power a small portable cabin or a large multi-user complex.

2 **Foundations**
Concrete or temporary foundation pads when your site conditions are unsuitable.

3 **Site connect**
We'll arrange to connect main utilities to your building so you're ready to go.

4 **Wi-Fi telecoms**
High speed internet instantly available so you don't have to wait months for your network provider.

5 **Data cabling**
Connects high speed internet to network ports, printers, phones and more.

6 **Fire safety technology**
Easy to install fire alert system that sends real-time alerts to any mobile device.
- 7** **Fire extinguishers**
Help fight a small fire and stop it becoming a major disaster.

8 **CCTV**
Site monitoring and 24/7 recording to deter criminal activities whilst protecting property.

9 **Temporary fencing**
Create a site perimeter and restrict unwanted visitors on your site.

10 **Climate control**
Maintain a consistent temperature to create a pleasant working environment for your people.

11 **Covid-19 solutions**
Screens and sanitisers to protect people from spreading the virus.

12 **Furniture**
Furniture is available from our Pickerings Essentials range. Please see website for details.

Generators

Everything you need for adequate and stable power on site.

Call 0333 300 2345 to speak with a product specialist or visit pickeringshire.co.uk

No matter what type of project you're working on getting the right amount of power for the job is an important consideration. For most construction sites, attaining a reliable power supply will require a generator and it is important to ensure it is optimally sized to match the load requirements of the site.

We can provide power solutions no matter whether your load is for a small portable office or a large modular building complex. Our generators offer a power range from 2kVA to over 100kVA with single and three-phase power options available.

Our plug and play system allows you to connect the generator to our building to give instant power.

All our generators comply with HSE regulations on emissions and noise. You can also hire all the ancillaries you need from Pickerings including fuel tanks, extension leads and distribution panels in single-phase or three-phase formats.

Foundations

Permanent and Temporary Foundations for your site.

If your site doesn't have reasonably well consolidated and level ground you'll need to arrange for foundations to be constructed. At Pickerings, we can provide you with a choice of foundations dependent on your ground conditions.

Site preparation including concrete foundations, drains and external works can be provided where necessary.

Temporary portable foundation pads provide a quick, easy and cost-effective alternative to concrete bases and are ideal where a building is to be installed on unsuitable ground such as tarmac. At the end of your project the temporary pads are simply removed leaving ground immediately ready to return to its original use without the need for remedial work.

Foundations can be laid on your site at the same time as your building is being prepared by us saving you time and allowing you to use your space for longer.

Site Connect

We'll save you time & hassle by connecting your mains utilities.

Call 0333 300 2345 to speak with a product specialist or visit pickeringshire.co.uk

When your Pickerings building has been delivered and installed it's ready for immediate use once you've connected to mains services. Unless you're using a Pickerings generator you'll need to connect to mains electrics and, if relevant, water supply and drainage as well.

With the Pickerings Site Connect service we'll visit site prior to building installation to assess your requirements. Once your building is installed we'll arrange for suitably qualified professional trades people to connect your mains services to your building so it's ready to use. No hassle, no worry.

Telecoms

Data cabling and instant high speed Wi-Fi telecoms.

Don't wait months and months for your network provider to install broadband as our high-speed internet solution can be installed the first day your portable and modular buildings arrive on site. Ensure your people have a ready to use solution, avoiding downtime whilst increasing efficiencies and productivity.

Our Wi-Fi telecoms service is nationwide no matter where you are and when several networks are available in your area we'll connect you to the one with the best service. Simply plug in and it's ready to use.

A range of data packages are available to meet your specific requirements so you pay for what you need and help to control your costs. To help control your spending and help financial planning we can put a cap on the amount of data you use. Alternatively, if you need extensive broadband use we can provide unlimited data.

Our data cabling service connects high speed internet to network ports, printers, phones and more to provide complete office coverage.

Fire Safety Solutions

Fire alert system and fire-fighting equipment to protect people and property.

Call 0333 300 2345 to speak with a product specialist or visit pickeringshire.co.uk

Our enhanced 24/7 site monitoring is an EN54 fully accredited wireless fire alert system. It is easy to install in Pickerings portable and modular buildings with no specialist tools, no training and no equipment required that quickly protects you in an emergency. It sends real-time alerts directly to any mobile phone device & pin-points the alert location to allow you to respond quickly.

Units available include base station, call point, heat detector, smoke detector, link and interface which can be used in any combination so you can choose the right solution for your site. An unlimited number of units can be used and you can add, remove or re-position them to give you continued protection and flexibility even when your circumstances change.

There is no need for external power due to long life batteries in each unit so as soon as they're fitted you're ready to go.

Further safety is available with our range of fire extinguishers to help fight a small fire and stop it becoming a major disaster. We can also provide a trolley system to allow fire extinguishers to easily be located closely to the scene of the fire.

Covid-19

Covid and sanitisation solutions for your protection.

Guidance from Public Health England has advised that Covid-19 virus spreads from person to person through small droplets, aerosols and direct contact and the risk of spread is when people are closest together. Social distancing and washing your hands regularly are amongst the most important ways to reduce the spread of Covid-19.

To help fight the virus, stop the spread and protect people we provide a range of solutions including sanitisers, desk screens and ceiling systems.

Desk screens create a safe distance to avoid close contact with others and offers protection from coughing and sneezing to help prevent spreading the virus. Screens are quickly and easily assembled to provide instant protection. Where there is no desk or table available our hanging ceiling system is the perfect alternative.

Our range of sanitiser units ensures people have easy access to hand hygiene.

Temporary Fencing

Restrict unwanted visitors on your site and create pedestrian walkways.

Our 2 metre high steel wire temporary fencing panels provide an instant and economical solution to form a site perimeter, create demarcation areas and restrict access onto your site.

Manufactured from galvanised steel for low maintenance. The heavy plastic feet, safety couplers connecting adjoining panels and wire mesh design not only provide security but ensure stability when erected on site. Low height crowd control barriers can easily and quickly form a pedestrian walkway to control the movement of people keeping them safe from entering a restricted area.

Vehicle gates help control the flow of vehicles on your site and pedestrian gates control people keeping them safe from entering hazardous areas.

CCTV

High impact CCTV security for your site.

The sight of a CCTV camera acts as a visual deterrent to thieves and vandals from carrying out illegal activities and highlights the site is under surveillance. It is a cost-effective solution to protect your property.

Site monitoring when your site is closed gives you increased sense of security and reassurance that activities can be followed enabling swift action to be taken.

We'll arrange to install cameras on your site with 24/7 recording in high resolution to help identify individuals acting suspiciously which can be key evidence if a crime occurs.

CCTV monitoring helps avoid potential losses, criminal damage and theft and can save you the costs, hassle and time of sorting out a break-in.

Climate Control

Maintaining a consistent work temperature.

Our climate control system ensures a constant temperature throughout the year to create a pleasant working environment. It helps avoid low workforce productivity due to unsuitable work temperature.

Benefits of air conditioning include the ability to control temperature and comfort levels; energy efficiency by minimising energy use and reducing costs; reduces humidity; air quality.

Our solutions include installation and commission at the outset of your project and decommissioning and removal once your project is completed. Full servicing of air conditioning units is available throughout.
