

Temporary and Permanent Foundations

DATA SHEET

Before your modular building and portable cabins are delivered to site you'll need to make sure you have well consolidated and level ground to install them. A part of our comprehensive Pickering's+ solutions we can arrange to provide foundations for you.

Features & Benefits

Concrete Bases - If your site doesn't have reasonably well consolidated and level ground we can provide concrete foundation bases as part of your site preparation. We'll excavate your ground to required depth as dictated by ground conditions and the type of building being installed.

Temporary Foundation Pads - A simple and affordable foundation system for well consolidated ground.

- Reduces time on site - the perfect solution to meet short lead times.
- Provides flexibility to achieve all base heights and overcomes fall in ground levels.
- Real cost savings compared to traditional concrete bases.
- Small, light and portable makes them easy

to handle and position.

- Meets manual handling regulations to conform to health & safety.
- Avoid waste, skips and landfill costs to help protect the environment.
- No ground or remedial works required at the end of the project leaving playgrounds and car parks undamaged and immediately returned to their original use.
- Permits an easy and quick installation of your portable and modular building.
- Saves time and hassle of construction concrete bases.
- Extremely durable - rot & insect proof, vandal & UV resistant.
- Manufactured from 100% recycled materials each pad is also recyclable
- Tidy, uniform appearance.
